

Найдите точку максимума функции $y = 11^{6x-x^2}$.

$$y = 11^{(6x-x^2)}$$

$$y' = 11^{(6x-x^2)}$$

$$= d(11^g)/dg * d(6x-x^2)/dx =$$

$$= \ln(11) * 11^{(6x-x^2)} * (6-2x)$$

$$\ln(11) * 11^{(6x-x^2)} * (6-2x) = 0$$

$$11^{(6x-x^2)} = 0 \quad (6-2x) = 0$$

$$\text{реш нет} \quad x = 3$$
