

## Среднее арифметическое нечётных элементов массива

```
import random
def peter(ms):
    i=0
    while i<len(ms):
        param=random.randint(0,1000)#25
        if param%3==0:
            ms[i]=random.randint(0,1000)
        elif param%3==1:
            ms[i]=(-1)*random.randint(0,1000)#147
        elif param%3==2:
            ms[i]=0
        i+=1
```

```
def alex(ms):
    i=0
    counter=0
    summa=0
    while i<len(ms):
        if ms[i]%2!=0:
            counter=counter+1
            summa=summa+ms[i]
        i+=1
    print(summa/counter,counter,summa)
```

```
a=[0]*20
print(a)
peter(a)
alex(a)
print(a)
```
