

*Find the POSITION of the minimal element  
You can use only 1 variable (for the position)*

*example*

*8 11 -7 6 5 2 elements  
0 1 2 3 4 5 positions  
answer 2*

```
void searchArray(int arr[], int length) {  
    int positionNum = 0;  
    for (int i = 0; i < length; i++) {  
        if (arr[i] < arr[positionNum]) {  
            positionNum = i;  
        }  
    }  
    std::cout << positionNum << std::endl;  
}
```
