

Найти третий по величине элемент массива

```
import random
mas = []
for i in range(0, 10):
    mas.append(random.randint(-10, 10))
print(mas)
max1 = mas[0]
max2 = mas[1]
max3 = mas[2]
for k in range(1, 10):
    if mas[k] > max1:
        max3 = max2
        max2 = max1
        max1 = mas[k]
    elif mas[k] <= max1 and mas[k] > max2:
        max3 = max2
        max2 = mas[k]
    elif mas[k] <= max2 and mas[k] > max3:
        max3 = mas[k]
print(max1)
print(max2)
print(max3)
```
