## Problem A. Arrange three numbers

Three numbers are given. Arrange them in non-decreasing order. The program must read three numbers $a, b, c$, then the program must change their values so that the read three numbers $a, b, c$, then the program must change their values so th
conditions $a<=b<=c$ are met, then the program outputs the triple $a, b, c$.

Input data
Three numbers are entered.
Output
Print the answer to the problem.
The program must contain exactly one call to the cout to print the result.
Examples of
input data
1
output
112

## 

```
int a = 0, b = 0, c = 0, temp = 0;
```

int a = 0, b = 0, c = 0, temp = 0;
std::cin >> a >> b >> c;
std::cin >> a >> b >> c;
// a = 5, b = 4, c = 3
// a = 5, b = 4, c = 3
// need: a = 3, b = 4, c = 5
// need: a = 3, b = 4, c = 5
if (a > b){ // a = 4, b = 5, c = 3
if (a > b){ // a = 4, b = 5, c = 3
temp = b;
temp = b;
b = a;
b = a;
a = temp;
a = temp;
}
}
if (b > c) { // a = 4, b = 3, c = 5
if (b > c) { // a = 4, b = 3, c = 5
temp = c;
temp = c;
c = b;
c = b;
b = temp;
b = temp;
}
}
if (a > b){ // a = 3, b = 4, c = 5
if (a > b){ // a = 3, b = 4, c = 5
temp = b;
temp = b;
b = a;
b = a;
a = temp;
a = temp;
}
}
std::cout << a << b << c << std::endl;

```
std::cout << a << b << c << std::endl;
```
